

PRODUCT REQUIREMENTS DOCUMENT

Better Version of Co-Star Personalized Astrology App

Simple, detailed, buildable PRD for MVP + future growth

Main Idea

Build a personal astrology companion that explains the user's birth chart, daily mood, relationships, and life patterns in simple language. The app should feel more personal, easier to understand, and more shareable than normal horoscope apps.

Item	Decision
App type	Mobile app for iOS and Android
Reference competitor	Co-Star style personalized astrology app
Recommended first name	InnerSky, StarMirror, AstralMe, or Cosmic Guide
Core user promise	Your birth chart, daily guidance, relationship compatibility, and personal cosmic guide in one app
First build goal	A focused MVP that can be developed without becoming too complex

Prepared for: Idrees Abdullah

Source used: your uploaded markdown PRD and the better Co-Star app direction you confirmed.

1. Executive Summary

1.1 Product Vision

The app will be a better, easier, and more personal version of Co-Star. It will not only show generic horoscope text. It will use the user's birth details to create personal daily readings, birth chart explanations, relationship compatibility, and a friendly astrology chat guide.

1.2 Problem

- Most horoscope apps feel generic. Users read the same text as thousands of other people.
- Birth charts are often hard to understand. Many users do not know what Sun, Moon, Rising, houses, and transits mean.
- Compatibility is popular, but many apps make it confusing or too serious.
- Users want content they can save, understand, and share with friends.
- Many apps look premium, but the explanations are not simple enough for beginners.

1.3 Solution

- Ask the user for birth date, birth time, and birth location.
- Generate the user's Big 3: Sun sign, Moon sign, and Rising sign.
- Create a daily reading that feels personal and easy to understand.
- Let the user ask questions through a friendly guide, not a cold chatbot.
- Create compatibility reports that are emotional, clear, and shareable.
- Give the user beautiful cards for Instagram, WhatsApp, and stories.

Best One-Line Pitch

A personal astrology companion that explains your chart, daily mood, and relationships in simple words, with beautiful shareable cards.

2. Product Positioning

The app should not be positioned as just another horoscope app. It should feel like a personal cosmic companion. The strongest message is personalization, simplicity, and emotional connection.

Weak Positioning	Better Positioning
Daily horoscope app	Personal cosmic companion
AI astrology app	Astrology guide that explains your chart in simple words
Birth chart calculator	Understand yourself through your Big 3 and daily energy
Compatibility app	Discover relationship patterns, strengths, and red flags
NASA data app	Personal readings based on your birth chart and current sky

2.1 Brand Feel

- Premium, but not boring.
- Mystical, but not childish.
- Emotional, but not fake.
- Simple enough for beginners.
- Shareable like a social app.

- Trustworthy with clear disclaimers.

2.2 Name Suggestions

Name	Why it works
InnerSky	Feels personal, premium, and emotional. Best overall option.
StarMirror	Feels like the app reflects the user's personality and life patterns.
AstralMe	Short, modern, and clear. Good for app store search.
Zodia	Simple and brandable. Easy to remember.
Cosmic Guide	Clear name for the chat or assistant feature.

3. Target Users

The first version should target people who are already interested in astrology, personality tests, relationships, and self-discovery. Do not try to target everyone in the world. Start with the users who already want this type of app.

User Type	What they want	Feature that helps them
Astrology beginners	Simple explanations of signs and birth chart	Big 3, chart guide, simple glossary
Relationship-focused users	Compatibility with crush, partner, or friend	Compatibility reports and share cards
Social media users	Beautiful content to post	Shareable daily cards and Big 3 cards
Self-discovery users	Understand moods, habits, strengths, and weaknesses	Daily readings and chart insights
Premium users later	Deeper reports and unlimited features	Subscriptions and advanced readings

4. MVP Scope

The first version must be focused. If you build too many features at the start, development will become slow and confusing. The MVP should prove that users like the core experience.

MVP Rule

Version 1 should do a few things very well instead of many things poorly.

4.1 Must-Have MVP Features

Feature	Simple Description	Priority
Birth chart onboarding	User adds name, date of birth, time of birth, and location.	P0
Big 3 result	Show Sun, Moon, and Rising signs with short meanings.	P0
Daily personal reading	Home screen shows today's love, career, money, mood, and advice.	P0
Birth chart screen	Show the user's chart details in a simple beginner-friendly way.	P0

Compatibility	Compare user with another person and show score + explanation.	P0
Cosmic Guide chat	User asks simple astrology questions and gets answers.	P1
Shareable cards	Generate beautiful cards for Big 3, daily advice, and compatibility.	P0
Profile	User can edit birth details and manage saved people.	P1

4.2 Do Not Build in Version 1

- Community forums.
- Video consultations.
- Full astrology blog.
- Advanced annual forecasts.
- Too many notification types.
- Complex social network features.
- Too many premium plans before user demand is proven.

5. Main App Features

5.1 Onboarding and Birth Chart Setup

- Welcome screen explains the promise in one sentence.
- Ask name first to make the app feel personal.
- Ask date of birth using a clean calendar picker.
- Ask time of birth using a simple time picker.
- Ask birth location using search/autocomplete.
- Show a loading screen: "Reading your sky..." or "Creating your personal chart..."
- Show the Big 3 result immediately: Sun, Moon, Rising.
- Then take user to today's reading.

5.2 Daily Personal Reading

This is the main home screen. It should feel like the app knows the user, but it must avoid dangerous or overly specific predictions.

Section	What it says
Today's Energy	A short summary of the day in simple words.
Love	Relationship and emotional advice.
Career	Work, study, ambition, and focus advice.
Money	Spending, patience, risk, and planning advice.
Mood	How the day may feel emotionally.
Advice of the Day	One short useful action.
Share Button	Create a nice story card from the reading.

5.3 Birth Chart Screen

- Show Big 3 at the top with clean cards.
- Show planets list: Sun, Moon, Mercury, Venus, Mars, Jupiter, Saturn, Uranus, Neptune, Pluto.
- For each planet, show sign, house, and short meaning.
- Use simple labels: "Your emotions", "Your communication", "Your love style", "Your action style".
- Do not overload beginners with too many astrology terms at once.

- Add "Learn more" expandable sections for advanced users.

5.4 Compatibility Feature

- User selects themselves and adds another person.
- The app calculates compatibility categories.
- Show overall score, love score, communication score, emotional score, and growth score.
- Explain strengths in a kind tone.
- Explain possible challenges without scaring the user.
- Create a shareable compatibility card.

Compatibility Category	Meaning
Overall	General relationship fit.
Love	Romance, attraction, warmth, and affection.
Communication	How easily both people understand each other.
Emotional Match	Comfort, mood, and emotional safety.
Growth	How both people can help each other improve.
Red Flags	Soft warning areas, written carefully.

5.5 Cosmic Guide Chat

This should feel like a friendly guide, not a technical chatbot. The user should be able to ask personal astrology questions.

- What does my Moon sign mean?
- Why do I feel emotional today?
- What does my Venus sign say about love?
- Are me and this person compatible?
- What should I focus on this week?
- Explain Mercury retrograde in simple words.

5.6 Shareable Cards

- Big 3 card: "I am Scorpio Sun, Leo Moon, Virgo Rising."
- Daily advice card: one quote-style insight.
- Compatibility card: "82 percent match" with names hidden or shown by user choice.
- Mood card: today's energy, lucky color, lucky time, and short advice.
- Card size: 1080 x 1080 for Instagram square and 1080 x 1920 for story.

6. User Flow

6.1 First-Time User Flow

1. User opens the app.
2. Splash screen appears for a short time.
3. Welcome screen explains the value.
4. User enters name.
5. User enters birth date.
6. User enters birth time.
7. User enters birth location.
8. App creates birth chart.
9. App shows Big 3 result.
10. App shows today's personal reading.
11. User can share, open chart, check compatibility, or ask Cosmic Guide.

6.2 Returning User Flow

12. User opens the app.
13. Home screen shows today's reading immediately.
14. User taps Love, Career, Money, Mood, or Advice to expand details.
15. User can share today's card.
16. User can open compatibility or chat from bottom navigation.

6.3 Bottom Navigation

Tab	Purpose
Home	Daily personal reading and mood card.
Chart	Big 3, planets, houses, and explanations.
Compatibility	Compare with crush, partner, friend, or family.
Guide	Chat-style astrology assistant.
Profile	User details, saved charts, settings, subscription later.

7. Screen-by-Screen Requirements

Splash Screen

- Logo in center.
- Dark mystical background.
- Short loading only; do not make user wait too long.

Welcome Screen

- One clear tagline.
- Primary button: Get Started.
- Secondary link: I already have an account.

Birth Details Screen

- Name input.
- Date picker.
- Time picker.
- Location search.
- Validation messages in simple words.

Big 3 Result Screen

- Three big cards: Sun, Moon, Rising.
- One-line meaning for each card.
- Button: See Today's Reading.

Home Screen

- Today's main message at top.
- Love, career, money, mood sections.
- Share card button.
- Quick button to ask Cosmic Guide.

Chart Screen

- Big 3 top summary.

- Planet list.
- Expandable explanations.
- Optional chart wheel for later.

Compatibility Screen

- Add/select person.
- Show scores.
- Show strengths, challenges, and advice.
- Share result card.

Guide Chat Screen

- Suggested questions.
- Chat interface.
- Keep answers simple and safe.
- Save helpful answers later.

Profile Screen

- Birth details.
- Saved people.
- App settings.
- Subscription later.
- Privacy and delete account.

8. Design Direction

The app should look premium and mystical but still clean. Avoid too much decoration because astrology apps can easily become messy. Use dark backgrounds, soft gradients, glowing cards, and readable text.

Design Area	Recommendation
Primary background	Midnight dark blue or deep purple.
Accent color	Gold, soft pink, or cosmic blue.
Cards	Rounded corners, soft glow, clean spacing.
Typography	Use a readable modern font like Inter, Manrope, or Plus Jakarta Sans.
Icons	Simple line icons for planets, heart, chart, chat, profile.
Animations	Small, smooth, and meaningful. Avoid heavy animations in MVP.
Accessibility	Readable contrast, large buttons, simple labels.

8.1 Suggested Color Palette

Color Role	Hex	Use
Deep Purple	#4A154B	Brand, headings, main gradient.
Midnight Blue	#1A1A2E	Main background.
Gold	#FFD700	Premium CTA, highlights, stars.
Soft Pink	#FF6B9D	Love and relationship sections.
Sky Blue	#4A90E2	Communication and guide chat.
Emerald	#2ECC71	Wellness and growth.
Light Text	#FFFFFF	Primary text on dark background.
Muted Text	#B0B0B0	Secondary text.

8.2 UI Style Rules

- Every screen should have one main action only.
- Use short text. Users should understand each card in 3 seconds.
- Avoid long paragraphs on mobile. Use expandable sections.
- Use a soft loading state instead of boring spinners.
- Keep bottom navigation always clear and easy to tap.
- Every important result should have a share button.

9. Technical Requirements

9.1 Recommended Stack

Layer	Recommended Tool	Reason
Mobile app	Flutter	One codebase for Android and iOS.
State management	Riverpod or Bloc	Clean and scalable Flutter structure.
Backend	Supabase, Firebase, or FastAPI	Fast to build MVP.
Database	Firestore or Supabase Postgres	Store users, charts, compatibility, readings.
Authentication	Firebase Auth or Supabase Auth	Email/social login with less work.
Astrology calculation	Swiss Ephemeris, Kerykeion, or a paid astrology API	Calculate signs and planetary data.
Text generation	Gemini, OpenAI, Claude, or other model API	Generate simple explanations and readings.
Notifications	Firebase Cloud Messaging	Daily reading reminders later.
Payments	RevenueCat	Subscriptions for iOS and Android later.
Analytics	Firebase Analytics or PostHog	Track retention, shares, and conversion.

9.2 App Performance Requirements

Metric	Target
App open time	Under 2 seconds where possible.
Home reading load	Under 2-3 seconds with caching.
Birth chart calculation	Under 3 seconds.
Compatibility result	Under 4 seconds.
Share card generation	Under 2 seconds.
Offline behavior	Show last saved reading if internet is not available.

9.3 Simple Architecture

- UI layer: screens, widgets, cards, forms.
- State layer: providers or blocs that control data shown on screen.
- Repository layer: connects app with backend, database, and APIs.
- Service layer: astrology service, reading generator, share card service, notification service.
- Model layer: user, birth chart, planet, reading, compatibility report, saved person.

Important Architecture Rule

Do not put astrology calculations, API calls, or business logic directly inside Flutter widgets. Keep widgets

clean and reusable.

10. Database Plan

The database should be simple for the MVP. Store only what is needed to make the app personal and fast.

Table / Collection	What it stores
users	User id, name, email, created date, subscription status.
birth_charts	User birth date, birth time, location, latitude, longitude, Sun, Moon, Rising, planets.
saved_people	Friends, crushes, partners, or family charts saved by user.
daily_readings	Generated reading for each user and date.
compatibility_reports	Two chart ids, scores, explanation, created date.
share_cards	Generated card type, image url, created date.
feedback	User likes/dislikes on readings to improve future text.

10.1 Minimum Data Fields

Model	Important Fields
User	id, name, email, createdAt, premiumStatus
BirthChart	id, userId, name, birthDate, birthTime, birthPlace, latitude, longitude, timezone
PlanetPosition	planetName, sign, degree, house, retrograde
DailyReading	id, userId, date, love, career, money, mood, advice, generatedAt
CompatibilityReport	id, userOneChartId, userTwoChartId, overallScore, loveScore, communicationScore, reading
SavedPerson	id, ownerUserId, name, relationType, birthChartId

11. Content and Prediction Rules

Astrology content must feel personal, but it should not make harmful or extreme claims. The app should be entertaining, reflective, and supportive.

11.1 Reading Tone

- Friendly and calm.
- Simple words.
- No scary predictions.
- No medical, legal, or financial certainty.
- Use phrases like "you may feel" instead of "this will happen".
- Give practical advice the user can act on.
- Avoid making the user dependent on the app for serious life decisions.

11.2 Example Daily Reading Format

Example

Today may feel emotionally active for you. Your mind wants clarity, but your heart may need comfort first. In

relationships, choose honest but soft words. In work or study, focus on one important task instead of doing everything at once. Money-wise, avoid emotional spending today. Your advice: pause before reacting, then speak with confidence.

11.3 Safety Disclaimer

- Add a clear note: "This app is for entertainment, reflection, and self-discovery."
- Do not present readings as guaranteed future events.
- Do not replace professional advice for health, finance, legal, or emergency decisions.
- If a user shares distressing content in chat, guide them toward real support and avoid pretending astrology can solve emergencies.

12. Monetization Plan

Start with a useful free version. Do not block the first value too early. Let users feel the app is personal, then offer premium features.

Plan	Features	Suggested Timing
Free	Big 3, daily short reading, limited compatibility, limited guide questions.	Launch MVP
Premium	Full daily reading, unlimited compatibility, weekly/monthly readings, more guide questions.	After user interest is proven
One-time reports	Deep compatibility report, yearly reading, birth chart PDF.	Phase 2 or 3
Referral reward	Invite friends to unlock extra compatibility or premium trial.	After sharing works

12.1 Good Premium Features

- Unlimited compatibility reports.
- Full birth chart explanations.
- Weekly and monthly readings.
- Advanced Cosmic Guide questions.
- Custom share card themes.
- Saved people limit increased.
- Deep PDF reports later.

13. Development Roadmap

Phase	Goal	Main Work
Phase 1 - Foundation	Prepare app structure	Flutter project, theme, navigation, auth, database models.
Phase 2 - Onboarding	Collect birth details	Welcome, birth form, location input, Big 3 result.
Phase 3 - Daily Reading	Deliver core value	Home screen, reading generator, cache daily readings.
Phase 4 - Chart Screen	Explain user chart	Planet cards, simple meanings, expandable learning sections.
Phase 5 - Compatibility	Add viral feature	Saved people, comparison logic,

		score UI, share card.
Phase 6 - Cosmic Guide	Add chat-style feature	Suggested questions, safe answers, limits.
Phase 7 - Polish and Testing	Improve quality	Bug fixes, speed, app icons, screenshots, analytics.
Phase 8 - Monetization	Add paid features	RevenueCat, premium locks, trial, subscription screen.

13.1 First 4-Week MVP Plan

Week	Focus	Deliverables
Week 1	Project setup	Flutter structure, theme, navigation, auth, base models.
Week 2	Onboarding + Big 3	Birth form, location input, chart calculation, Big 3 screen.
Week 3	Home + daily reading	Reading cards, generator prompt, cache, share card draft.
Week 4	Compatibility + polish	Add person, result screen, basic share, bug fixes.

14. Risks and Fixes

Risk	Why it matters	Fix
Too many features	Development becomes slow and unfinished.	Build focused MVP first.
Generic readings	Users will feel it is fake.	Use birth chart + daily context + user name + simple tone.
High API costs	Text generation can become expensive.	Cache daily readings and limit free chat.
Wrong birth chart data	Users lose trust.	Use reliable calculation library/API and test many examples.
App feels too complex	Beginners leave quickly.	Use simple explanations and expandable details.
Low retention	Users open once and leave.	Daily reading reminders, share cards, and streaks later.
Privacy concerns	Birth data is personal.	Clear privacy policy, delete account, secure storage.

15. Final Build Checklist

15.1 Product Checklist

- App has clear name and one-line promise.
- Onboarding takes user to value quickly.
- Big 3 result is easy to understand.
- Daily reading is personal and not generic.
- Compatibility is simple and shareable.
- Cosmic Guide answers in simple words.
- Share cards look beautiful.

- Privacy and entertainment disclaimer are visible.

15.2 Developer Checklist

- Flutter project has clean folder structure.
- Widgets do not contain business logic.
- API keys are not stored inside public code.
- Readings are cached daily to reduce cost.
- Database rules protect user data.
- App handles no internet state.
- Forms validate birth date, birth time, and location.
- All core screens are tested on small and large phones.

15.3 Launch Checklist

- App icon and splash screen ready.
- Play Store listing text ready.
- Screenshots ready.
- Privacy policy ready.
- Support email ready.
- Analytics installed.
- Crash reporting installed.
- Beta testing with at least a small group of users.

Final Recommendation

Build Version 1 around four strong pillars: birth chart onboarding, daily personal reading, compatibility, and shareable cards. Add Cosmic Guide chat as soon as the core app is stable.
